

STYRENE MONOMER (SM)

Styrene monomer (SM) is a colorless liquid, used in essential items such as coatings, asphalt, tires, rubbers and resins. It features in a number of applications, from paper to tractors, trucks, boats and bus seats, from shirt buttons to textile items, from swimming pools to gas station tanks.

It has a distinguished role in Innova's portfolio as an essential feedstock to our petrochemical resins: general purpose (GPPS), high impact (HIPS) and expandable (EPS) polystyrenes, as well as the all-new ECO-PS®.
